

# ANSYS and LSTC together: When one plus one is greater than two

Jean-Daniel Beley

Senior Director, Mechanical Solvers

Nordic LS-DYNA Users' Conference 2022

The logo for LS-DYNA MORE, featuring a blue square icon to the left of the text "DYNA" in bold black letters, with "MORE" in blue letters below it.

**DYNA**

The Ansys logo, consisting of a yellow diagonal bar followed by the word "Ansys" in a bold, black, sans-serif font.

**Ansys**

Ansys is the global leader in simulation for over 50 years

### Strong business, technology & partnership foundation

- In the S&P 500 and NASDAQ-100
- \$1.9B annual revenue (2021)
- **\$5B+** Investments in Physics advancements
- 5,000+ employees in 40 countries
- 750+ PhDs and 450+ patents
- 150+ channel partners
- 1050+ participants in **Startup Program**
- 1.4M+ student software downloads
- 2,750+ **Academic partners** in 92 countries

# ANSYS Portfolio

*“Driving digital transformation and test cost reduction in engineering”*

## Simulation is All We Do

- 85 Ansys products
- Development team focused on simulation
- A managed, customer-specific learning program

## Open Ecosystem

- Integration with partners & competitor products
- Connect on-premises and in the cloud
- Optimized with artificial intelligence and machine learning

## Our Commitment (unchanged since 2019)

### **CONTINUE LEGACY OF TWO LEGENDS IN CAE**

### **ALLOW INNOVATION TO THRIVE**

### **CONTINUE TO KEEP CUSTOMER CENTRIC FOCUS**

- Continue Current Development Trajectory
- Integrate and Work with LSTC partners  
Continue Direct Customer Engagements
- Continue Partnership with 3<sup>rd</sup> Party Pre-Processors
- **No Forced Migration**, Use tools the way you see fit
- Integrate LS-DYNA into ANSYS Workbench
- Joint Projects with Flagship Solver technologies

## Benefits To Customers From Combined LSTC+ANSYS

### **LS-DYNA technology part of an established company dedicated to simulation**

*Along with the security that comes with a company with a proven track record for CAE, customers can be assured of LS-DYNA expanding more than ever.*

### **Bringing together the world's best implicit and explicit solver technology and scientists**

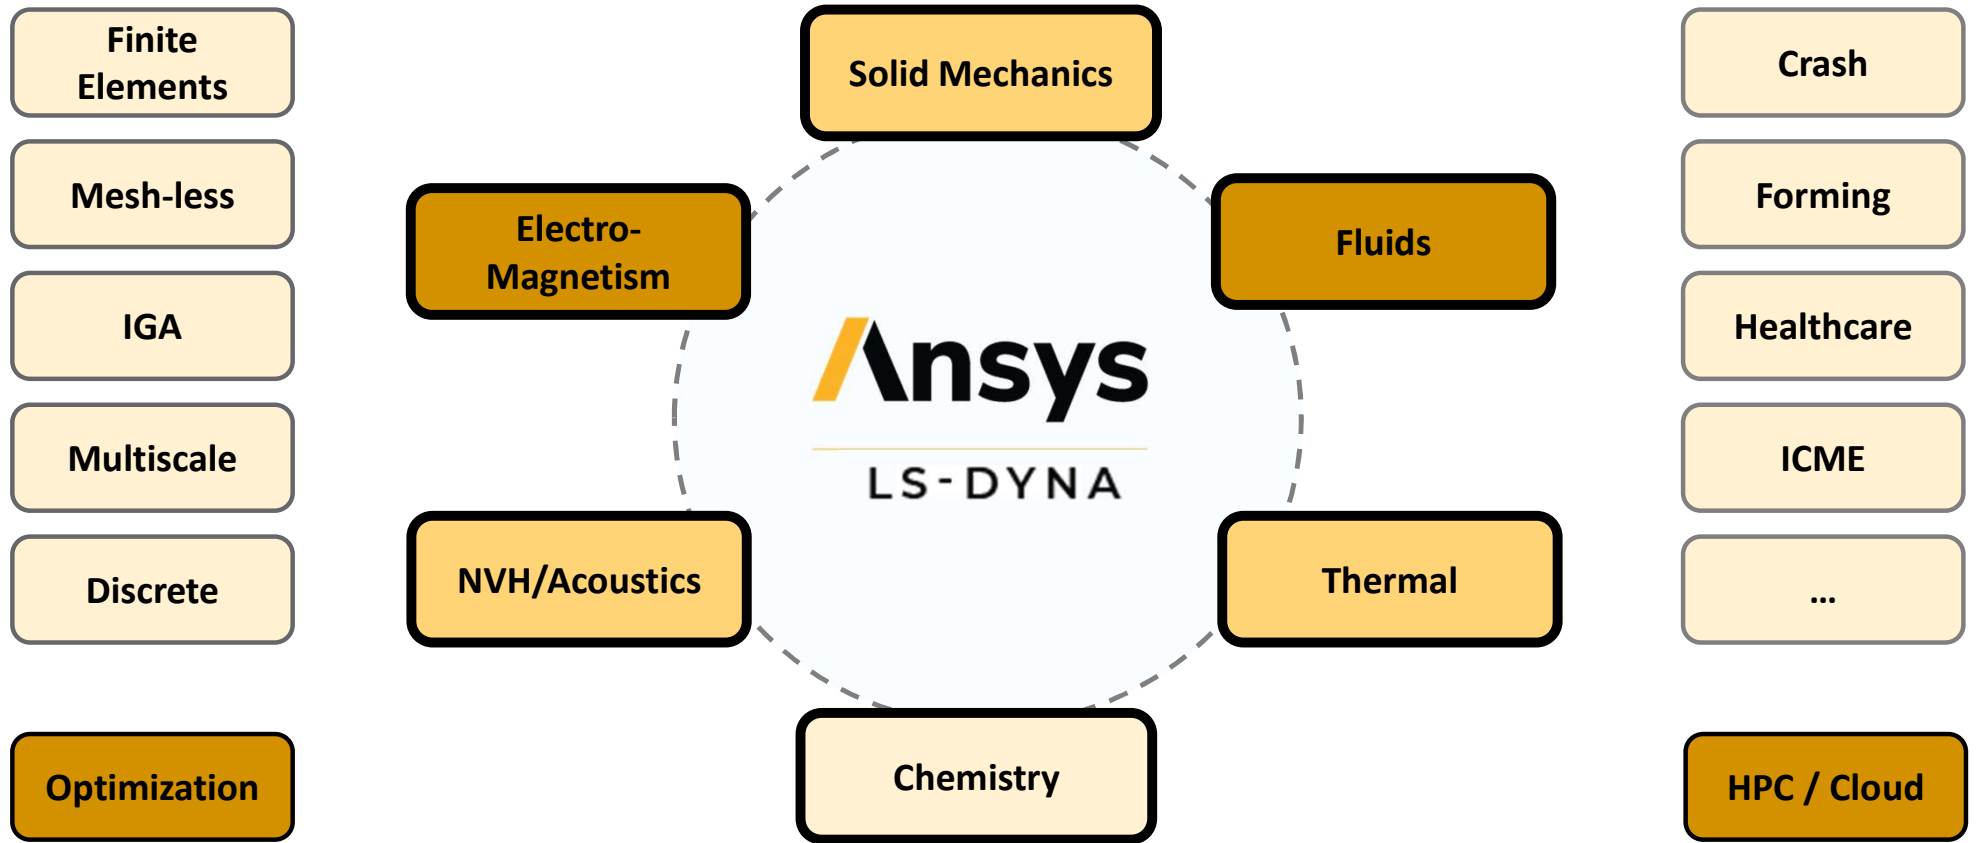

*ANSYS and LSTC scientists have joined forces to push boundaries. This results in better software in both product lines.*

### **LSTC provides an important piece of a broader scope of simulation tools within the ANSYS portfolio**

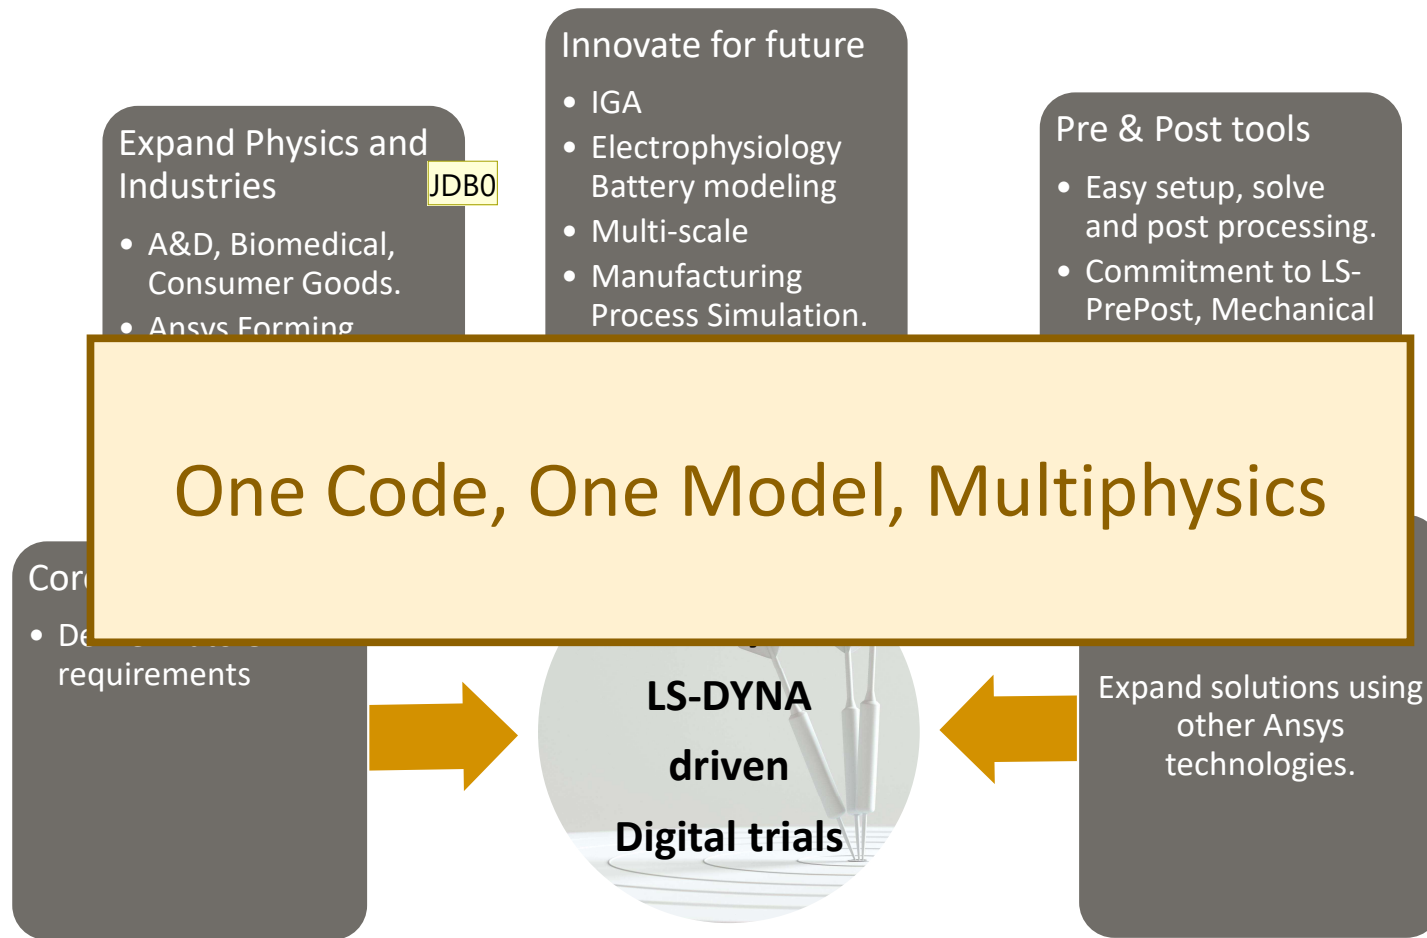

*Improved interaction and integration between DYNA and other tools such as Mechanical, optiSlang, Maxwell, Fluent, Material Calibration, Granta Material Information...*

**JDB0**

Expand Physics beyond crash

Jean-Daniel Beley, 2022-10-05T10:22:00.193

## / Selected Projects: LS-DYNA Solvers

- Sustain excellence and leadership in core **Explicit** technology areas including **Crash**
- Exchange and unify the best **Implicit** solver technologies with **LS-DYNA** and **MAPDL**
- Combine **AUTODYN** solver with **LS-DYNA** for world class **Blast** and **Explosion** modeling
- Enhance optimization technology and workflows with **LS-OPT** , **LS-TaSC** and **optiSLang**
- Accelerate **IGA** initiative with added preprocessing/meshing/postprocessing support from other Ansys flagship Technologies
- Develop workflows with **LS-DYNA** and **MAPDL** for a comprehensive **Acoustics** solution
- Develop **Multi-Scale** modeling for solving **Electronics** reliability problems
- Develop and align **LS-DYNA** technology to augment Ansys **Battery** Modeling initiative

# VISION for Automotive

- **Enhancing accuracy**

- Iso Geometric Analysis (IGA) for higher order spatial accuracy with larger time steps
- IGA for more accurate NVH and acoustic results
- Improving the incorporation of manufacturing modeling results into crash analysis
- Replacing Human Body Models with virtual humans with technology from biomedical industry work
- Enhance Airbags modeling

- **Enhancing speed**

- Reduced meshing time and coarse mesh accuracy with IGA
- Alternative discretizations for speed, e.g., ISPH instead of traditional ICFD
- Support for advanced computer architectures as they become available

- **Enhancing product development integration**

- Closing the loop on CAD and CAE through IGA
- Improved communications between LS-DYNA and 3rd party applications (e.g., controls modeling) for autonomous driving and airbag deployment

# Ansys Forming

- A process-centric solution for metal stamping simulation.
- Easy to setup multi-stage forming simulations.
- Customizable templates for easy setup of forming processes.
- Easy job submission and monitoring.
- Integrated Post processing.

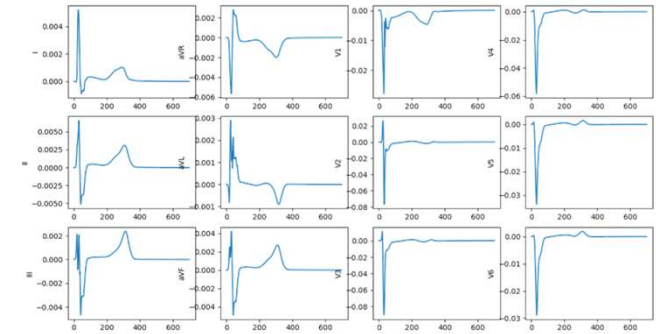

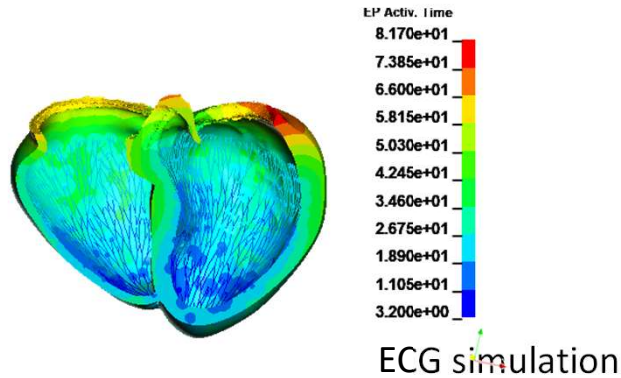

## Ansyes Battery Abuse Program

- A framework of battery safety modeling that couples mechanical, thermal, electrical and electrochemical responses of batteries.
- No other code has this Multiphysics capability, especially the coupling between the mechanics and the rest.
- Development is working in collaboration with industry partners.
- Calibration of simulation solver is effective only when industries & academia shares experimental test data.

# Healthcare - Electrophysiology (EP)

- Automatic generation of Purkinje network which can be coupled to mono/bi domain models
- Ionic cell models: FitzHugh-Nagumo, Fenton-Karma, ten-Tusscher, TO-ORD, user defined
- Computation of EKG from trans-membrane potential
- Computation of external potential function of TM potential in monodomain.

## Isogeometric Analysis – Current Status

- Explicit, implicit dynamics and modal analysis.
- Structured and unstructured discretization.
- Shell, continuum shell and solid elements.
  - Reduce utilized memory, speed up computation *without* compromising on accuracy
- Coupling with other solvers e.g., ICFD, acoustics
- Standard LS-DYNA and user defined material models.
  - Failure and element erosion.
  - Spatially varying baseline orientation using point cloud and field for non-isotropic materials.

# Multi-Scale

- Multiscale problems inevitably arise in many fields and applications.
- In solids/structures, fine-scale solutions can be found in **material failure, joints/assembly, manufacturing** and **microstructure** strongly affecting the simulation accuracy.
- Traditional multiscale methods is computationally very expensive.
- Need to develop effective numerical methods to solve the multiscale problems.

# pyAnsys/pyDyna: Cloud-enabled APIs to all ANSYS products

The screenshot shows the PyAnsys API reference documentation for the `pre.dynabase` module. The page title is "pre.dynabase" and the subtitle is "Base". Below the title, it says "Module to create dyna input deck". A table lists the classes available in the module:

Class	Description
<code>AnalysisType</code> (value)	An enumeration.
<code>BaseSet</code> ()	Define the base class for all set classes.
<code>BeamFormulation</code> (value)	An enumeration.
<code>BeamPart</code> (pid)	Define parts, that is, combine material information, section properties, hourglass type, thermal properties, and a flag for part adaptivity.
<code>BeamSection</code> (element_formulation[, ...])	Define cross sectional properties for beam, truss, discrete beam, and cable elements.
<code>BoundaryCondition</code> ()	Provide a way of defining imposed motions on boundary nodes.
<code>Box</code> ([xmin, xmax, ymin, ymax, zmin, zmax])	Define a box-shaped volume.
<code>BulkViscosity</code> (value)	An enumeration.
<code>CaseType</code> (value)	An enumeration.

The screenshot shows the PyAnsys API reference documentation for an "Airbag deploy example". A note at the top says "Click here to download the full example code". Below the title "Airbag deploy example", it says "This example show how to create an Airbag deploy model with Pydyna-pre module". A code block shows the following Python code:

```
import os
import sys

sys.path.append(os.path.join(os.path.dirname(__file__), '../..'))
from ansys.dyna.pre.dynasolution import *
from ansys.dyna.pre.dynamech import *
from ansys.dyna.pre.dynamaterial import *

if __name__ == "__main__":
    hostname = "localhost"
    if len(sys.argv) > 1:
        hostname = sys.argv[1]

    airbag_solution = DynaSolution(hostname)
    fna = []
    path = os.getcwd() + os.sep + "input" + os.sep + "airbag_deploy" + os.sep
    fna.append(path + "airbag_deploy.k")
    airbag_solution.open_files(fna)

    airbag_solution.set_termination(0.03)
    airbag_solution.create_database_binary(dt=5e-4, ieverp=1)

    airbagdeploy = DynaMech()
    airbag_solution.add(airbagdeploy)
```

## Summary

- Ansys is committed to meet market requirements for the industries we serve
- Ansys has a keen focus on performance and relentless pursuit of innovation
- Ansys is agile with a close network of developers to keep pace with customer needs
- Ansys is strongly engaged with prototype reduction strategies and digital certification
- Ansys will enable customer workflows & solutions with Ansys/Partner tools
- Ansys and Dynamore is the best partnership to help you achieve your goals
